From The Bottom Line: Money Basics

Thinking Ahead

Money management probably sounds very dull to you. You might think financial planning means you have to put all your money in the bank. It might make you fear that you'll never have any cash for fun things like going to the movies or buying a new outfit. But that's not what it's all about.

Financial planning simply means giving some thought to the things you want—and the things you need—and coming up with a plan to get them. It means balancing spending money with saving money. It means knowing where your money comes from and where it goes.

Financial planning is also about setting goals. Again, that might sound like a big bore. But what if one of your goals is to buy that new bike, or like a big bore. But what if one of your goals is to buy that new bike, or like a big bore. But what if one of your goals is to buy that new bike, or like a big bore.

The first step in reaching your financial goals is to figure out what they are. Start dreaming and make a wish list!

The items on your list will probably fall into three categories:

1. Things you can afford now with the money you have.
2. Small things that a few weeks' allowance or a paycheck from your part-time job will cover.
3. Big things that you'll have to save for a long time.

Go for the Goal!

These are called short-term, medium-term, and long-term financial goals. A short-term goal might be to download a new app or game, buy a bottle of nail polish, or go to a movie with friends. A medium-term goal might be to get a new pair of shoes, a skateboard, or a fat birthday gift for your BFF. Long-term goals could include purchasing such things as a TV for your bedroom, a smart watch, or rock-climbing lessons. The sky's the limit!

Now take a look at your wish list. Which items are the most important to you? Buying a TV is more important to you than going to the movies with your friends every week, make a note of that. It doesn't mean you'll never go to the movies with your friends again. It simply means you're starting to think about what matters to you. By skipping the occasional movie, you can bank a bit of extra cash to get you closer to buying that smart watch.

The idea is to figure out which things matter to you most, and what choices you're willing to make to get them.

Remember, if you spend all your money as soon as you get it, you may never reach your medium- or long-term financial goals. Sure, it can be more fun now to blow your bucks on music, movies, or munchies than to bank them for use later. But if you save a portion of your weekly allowance and a bit of birthday money, you'll be surprised at how quickly those dollars will add up to the purchase price of a phone, concert ticket, or that blingy thing that caught your eye.

Focus on Finances

Make a Wish List

Studies show that writing down your goals makes them more likely to become reality. So start writing!

1. Create a two-column chart. In the left-hand column, list all the things you want to do or buy that cost money.
2. In the right-hand column, note whether each item is a short-, medium-, or long-term goal.
3. Use different colored highlighters or pens to label each item as low-, medium-, or high-priority.

Be Careful Out There!

When setting financial goals, make sure they are realistic. Buying a model airplane kit next month or a remote-controlled plane within the next year are probably realistic goals. Buying a real airplane next month or next year is probably not. However, it might be realistic for you to buy a real airplane in 20 years. If that's something you want to do, put it on your list—in the long-long-term column.
